

Two Day Competent Rescue

Who is this class for?

This class is geared to train anyone on Rescue in an industrial setting.

Why do I need industrial rescue?

This class will teach you how to inspect, identify, and use all equipment properly for rescue of personnel.

What does the 2 day class entail?

At the beginning of the class, we hand out Rescue manuals. A PowerPoint presentation covers the following information:

- Identification of rescue equipment
- Proper usage of rescue equipment
- How to use belay techniques for single and double pick off.
- How to build and use mechanical advantage systems for rescue.
- How to work together as a team and perform Rescue in a safe and prompt manner.
- How to package and rig up a stokes or sked stretcher for rescuing of patient.
- How to plan and write JSA for rescue.

We also have hands on exercises throughout the class, along with demonstrations of how to use some pre-made mechanical advantage systems. At the end of the class, we will issue a test to make sure the information is retained. At the conclusion of the class, we will issue a picture card certifying completion if the student passed the test.

What happens if a person is using Rescue equipment outside of its limitations?

It will not work properly! It is possible the equipment could fail. Performing Rescue in a safe and timely manner may not be possible.

Where can Safety Connection, Inc. perform the class?

Anywhere you would like. We can perform the class at your location or our training facility in Baton Rouge, LA.

What will be needed if we come to your location?

All we need is a classroom, table, and a screen to apply the PowerPoint presentation to teach your students.
